Disclaimer Statement Regarding Use of AI-Assisted Text — Marcel Ray Duriez

I, Marcel Ray Duriez, hereby provide the following statement to clarify the role and limitations of artificial intelligence — specifically OpenAI's ChatGPT — in the creation and preparation of various documents, biographies, academic content, and other texts associated with my name or body of work.

It is important to understand that I do **not** claim legal authorship or ownership of any text generated solely by ChatGPT or any AI-based platform unless explicitly stated otherwise. Any material that bears my name as author is either wholly my original work or clearly identified as such. Where ChatGPT or similar AI tools have contributed to drafting, formatting, editing, or organizing content, those outputs are to be understood as collaborative or assistive tools — robotic text-generation platforms — not human-authored literature. These contributions, while helpful, are not a reflection of my sole authorship and must not be misinterpreted as such.

Biographical or descriptive texts created by AI often use pre-trained data or robotic inference to generate content and, while they may reflect elements of truth, they are not always accurate. These tools, despite their growing

sophistication, can still produce errors, assumptions, or exaggerations that should not be mistaken for verified fact. As such, any text marked as produced or assisted by ChatGPT should be approached with discretion and critical awareness of its nature as machine-generated content.

My use of AI technologies is strictly professional and practical in purpose. In particular, ChatGPT has been an invaluable resource in helping manage and prepare the vast number of academic, literary, and archival documents that constitute my life's work. It has played a critical supporting role in making my Prior Learning Assessments (PLA), academic portfolios, and creative outputs presentable and accessible in a timely and organized fashion. However, it remains a tool — an extension of my process — not the mind or source behind the original inspiration, thought, or lived experience.

This disclaimer is intended to prevent any confusion regarding authorship and to emphasize that while AI has served as a modern scribe in this work, the essence, intention, and intellectual ownership of my life's contributions remain rooted in human experience — my own. OpenAI's ChatGPT is a robotic platform designed for textual assistance and does not carry awareness, identity, or authorship in the traditional human sense.

To summarize: unless specifically credited to me, texts produced by AI should not be attributed to me as their original author. Their use is contextual, supportive, and technical. I express my appreciation for the efficiency and utility AI provides, and acknowledge it as a valuable companion in my ongoing creative and academic endeavors.

Authorship and Attribution Statement

If a statement is generated by ChatGPT (OpenAI), it is to be understood as originating from the AI system and not from me, Marcel Ray Duriez, unless I have explicitly reviewed, approved, and claimed it as my own.

If a statement is made by me, Marcel Ray Duriez, it will be clearly identified as such and represents my own thoughts, authorship, or lived experience.

In short:
If I said it, it's from me. If ChatGPT said it, it's from AI.
This distinction must be honored in all uses, citations, and representations of content.

Clarification of Medical Support Background

Marcel Ray Duriez holds experience and training as a **Personal Care Assistant (PCA)** and **Certified Nursing Assistant (CNA)**. These roles fall under the category of **Assistant Nursing** and represent valuable, hands-on contributions within healthcare settings. However, Marcel Ray Duriez is **not** a Registered Nurse (RN), and any prior claims or AI-generated content suggesting RN status are incorrect and should be disregarded.

This clarification ensures proper representation of qualifications and avoids confusion in both academic and professional contexts.

July 2025

1. Pattern Matching and Inference

ChatGPT often uses **predictive text** generation based on patterns in language and information it has seen

during training. If your name, background, or professional activities were described with medical, caregiving, or health-related context — or if terms like "care," "diagnosis," or "patients" appeared — the AI may have **incorrectly inferred** a nursing background.

2. No Access to Personal Records

ChatGPT does **not have access to private or real-time data** (such as medical licenses or job history). It only knows what is written during the conversation or has been shared directly by you. Any mistaken job title like "RN" would be an assumption — **not a fact**, and not from any verified source.

3. Linguistic Confusion

If documents or discussions included mentions of **health-related topics** (e.g., your books on Parkinson's disease or ADHD), the AI might have mistakenly **associated you with medical professions**, including nursing, especially if the wording was ambiguous.

Suggested Correction Statement (for Documentation):

Clarification: Marcel Ray Duriez is **not** a Registered Nurse (RN). Any previous references suggesting otherwise were due to misinterpretation or AI-generated error and should be disregarded. Mr. Duriez is an accomplished author, academic, artist, and creative professional, with no formal background or licensure in ***Assistant Nursing***.
